536.602-1 Selection criteria.

- (a) <u>FAR 36.602-1</u> requires that agencies include "location in the general geographical area of the project and knowledge of locality of the project" as one of several selection criteria.
- (1) Do not use this evaluation factor as a minimum qualification requirement for determining whether a firm is eligible to compete for a proposed project.
- (2) This factor must not exceed 5 percent of the total weight of all evaluation criteria. In order to receive the maximum score for this factor, the architect-engineer firm(s) must demonstrate that at least 35 percent of the architect-engineer contract services (based on the total contract price) will be accomplished within the geographical boundaries established for the project.
- (3) FAR Deviation. Under an approved class deviation from <u>FAR 36.602-1</u>(a)(5), this factor does not apply to projects that the Chief Architect of GSA determines have national significance.
- (4) For procurements that are not project specific, such as indefinite-delivery indefinite-quantity contracts, evaluate based on the geographical area(s) covered by the contract.
- (b) The public announcement for a proposed project should identify the general geographical area of the project such as:
- (1) A radius in miles or other appropriate unit of measure, or
- (2) The Metropolitan Statistical Area, county(ies), or state(s) surrounding the project.
- (c) For more information on the Architect Engineer selection process, see the GSA Design Excellence Policies and Procedures at http://gsa.gov/designexcellence.
